Mobile: +1 443-378-6940

## PROFILE

---

- Current Ph.D. Student in Department of Applied Mathematics and Statistics, Johns Hopkins University.
- Research Interest: AI for Science, LLMs, diffusion models, Reinforcement Learning, stochastic control.
- Diverse research experiences: Ph.D. Candidate of Applied Mathematics and Statistics at JHU, One-Year Ph.D. Student at NUS Computing, Caltech Visiting Undergraduate Research Program.

## EDUCATION

---

### Johns Hopkins University

Aug 2024 – Present

#### Ph.D. Candidate, Department of Applied Mathematics and Statistics

Advisor: Haoyang Cao

Research Direction: Memory-Efficient LLMs, Reinforcement Learning, Impulse Control Problems.

### National University of Singapore

Aug 2023 – Jun 2024

#### Ph.D. Candidate, Department of Computer Science

Advisor: Kenji Kawaguchi and Johnathon Scarlett

Research Direction: AI for Science, Physics-Informed Neural Networks, Memory-Efficient LLMs.

### Shanghai Jiao Tong University

Sep 2019 – Jun 2023

#### Bachelor of Mathematics and Applied Mathematics (Zhiyuan Honors Program)

Selected Coursework: Probability, Statistics, Stochastic Process, Foundations of data science, Numerical Analysis and Scientific Computing, Partial Differential Equations, Fourier Analysis and Real Analysis, etc.

## RESEARCH EXPERIENCE

---

### JHU: Continuous-Time Reinforcement Learning for Randomized Impulse Control Problems

Dec 2024-Present

- Professor of guidance: Haoyang Cao.
- Designed two randomization methods for impulse control problem (Poisson compound measure/ Relation to optimal stopping) which produces the same HJB equation.
- Proved convergence theorem for randomization approach.
- Designed an actor-critic RL algorithm and proved the policy improvement theorem.

## **NUS: Statistical Mean Estimation with Coded Relayed Observations**

May 2024-Aug 2024

- Professor of guidance: Jonathan Scarlett.
- Studied the problem of statistical mean estimation, in which the samples are not observed directly, but are instead observed by a relay (“teacher”) that transmits information through a memoryless channel to the decoder (“student”), who then produces the final estimate.
- Focused on Bernoulli sources and binary symmetric channels, and then sub-Gaussian and heavy-tailed settings along with arbitrary discrete memoryless channels.
- Designed a block-structured strategy, proved its superiority on error rate compared with baselines.

## **NUS: Bias-Variance Trade-off in Physics-Informed Neural Networks with Randomized Smoothing for High-Dimensional PDEs**

Aug 2023-Nov 2023

- Professor of guidance: George Em Karniadakis from Brown University, Kenji Kawaguchi from NUS.
- Conducted in-depth research for physics-informed neural network with randomized smoothing, a backpropagation-free method for high-dim PINN, which addresses the memory and time costs brought by curse of dimension.
- Analyzed the bias-variance trade-off in Randomized Smoothing-PINN training.
- Corrected the bias brought by randomized smoothing in non-linear MSE loss and PDE terms.
- Proposed a hybrid loss function of biased and unbiased version to accelerate convergence of training and improve final accuracy. Biased training loss provides faster convergence, while unbiased training loss ensures better accuracy.
- Conducted extensive experiments on various PDEs including Fokker-Planck, HJB, Allen-Cahn, Sine-Gorden, etc.

## **NUS: Gradient-Enhanced Physics-Informed Neural Networks with Variance Reduced Randomized Smoothing for High-Order and High-dimensional PDEs**

Aug 2023-Jan 2024

- Professor of guidance: George Em Karniadakis from Brown University, Kenji Kawaguchi from NUS.
- Generalized RS-PINN to high-order derivatives and various differential operators.
- Proposed variance reduction methods for randomly smoothed derivative estimators, including antithetic variate method, importance sampling, and Gaussian quadrature.
- Proved that gradient-enhanced techniques are basically free lunch under randomized smoothing, which greatly improves the efficiency of training.
- Conducted thorough experiments on low-dim and high-dim PDEs with RS-GPINN.

## **Caltech VURP (Visiting Undergraduate Research Program): Distributionally Robust Policy Gradient for Offline Contextual Bandits**

Mar 2022-Oct 2022

- Professor of guidance: Anima Anandkumar from Caltech, Pan Xu from Duke University.
- Proposed a distributionally robust policy optimization method (DROPO) for offline contextual bandits, addressing the distributional shift between the static logging policy and the learning policy in policy gradient.
- Modelled the distributionally robust policy optimization problem as a minimax optimization problem, which has an analytical framework of solution.
- Generalized the DROPO method to contextual bandits with limited online exploration.
- Provided a generalization bound and a convergence analysis for DROPO.
- Designed and implemented experiments on *UCI Optdigits* and *MNIST*.

## **A General Framework for Accurate and Private Mean Estimation**

July 2021-Jun 2022

- Professor of guidance: Yuantao Gu from Tsinghua University.
- Proposed a differentially private mean estimation algorithm for general types of distributions with given cumulative distribution function.
- Proved an upper bound for the algorithm’s sample complexity, which is tailored to the cumulative distribution function of underlying population.
- Illustrated that our complexity bound is better in order for heavy-tailed distribution and at least enjoys the same order for light-tailed distribution.
- Designed and implemented experiments on Gaussian distribution and Levy-stable distribution.
- Independently studied the book *"High-dimensional Probability"* written by Roman Vershynin.

**Bachelor’s Thesis: Machine Learning Methods-Based Inverse Lithography Technology**

Aug 2021-May 2023

- Professor of guidance: Dan Hu from Shanghai Jiao Tong University.
- Conducted a thorough literature review for the development of Inverse Lithography Technology over past decades.
- Proposed a complete machine learning methods-based ILT framework is proposed, which consists of a sequential framework of machine learning-based ILT and simulated annealing method-based ILT.
- Designed a convolutional neural network (UNet) to learn the mapping from on-wafer patterns to masks.
- Introduced a simulated annealing method based-ILT framework to refine the quasi-optimized masks and achieve better mask quality.
- Implemented the ML-based ILT framework and conducted experiments on ICCAD 2013 dataset.

**HONORS AND AWARDS**

---

- |   |                        |
|---|------------------------|
| • Outstanding students Scholarship of Shanghai Jiao Tong University | 2019-2023 (four times) |
| • Honors scholarship for students of Zhiyuan College                | 2019-2023 (four times) |

**TEACHING EXPERIENCE**

---

- |   |                   |
|---|-------------------|
| • Teaching Assistant for Introduction to Computational Mathematics (EN.553.385) | Aug 2024-May 2025 |
|---|-------------------|
